

WHAT IS ULTRAVIOLET WATER TREATMENT?

Ultraviolet water treatment is a unique and rapid method of water disinfection, without the use of heat or chemicals.

Ultraviolet water purifiers utilize germicidal ultraviolet lamps that produce short wave radiation lethal to bacteria, virus and other microorganisms present in water.

Through the years, ultraviolet water treatment has become well established as a method of choice for effective and economical water disinfection.

Ultraviolet water purifiers are the ideal solution for an ever-growing range of water treatment applications.

We offer ultraviolet water purifiers in a variety of models, each with their own range of flows and features, to suit multiple applications.

ADVANTAGES

Effective

Virtually all microorganisms are susceptible to ultraviolet disinfection

Economical

Hundreds of gallons are purified for each penny of operating cost

Safe

No danger of overdosing, no addition of chemicals

Fast

Water is ready for use as soon as it leaves the purifier—no further contact time required

Automatic

Provides continuous disinfection without special attention or measurement

Chemical-Free

No chlorine taste or corrosion problems

Versatile

Capacities available from 1.5 gallons per minute to millions of gallons per day

MICROORGANISMS DEACTIVATED BY GERMICIDAL ULTRAVIOLET LIGHT

Organism	Alt. Name	Type	Disease	Dose*
Bacillus subtilis spores	B.subtilis	Bacteria	_____	22,000
